

Vikas Dhruw

Pune, Maharashtra, India | dhruwv499@gmail.com | github.com/Vicky404-git | linkedin.com/in/vikas-dhruw-793a60345 | vicky404-git.github.io

Computer Science (AI & ML) student building backend systems and AI-integrated developer tools with Python, Java, and C. Focused on Linux-first, local-first architectures — daemons, CLI systems, and retrieval-augmented AI applications — with hands-on experience in systems programming, workflow automation, and collaborative software development.

SKILLS

Languages: Python, Java, C, SQL, Bash

Backend & Frameworks: FastAPI (REST APIs), Streamlit, LangChain, Scikit-Learn, FAISS

Systems & Linux: Linux (Debian), Linux System Administration, Docker (Containerization), Git, GitHub

AI & LLM: Retrieval-Augmented Generation (RAG), Ollama, HuggingFace, Groq API Integration, LLM Applications

Databases: SQLite

Core Concepts: Data Structures & Algorithms, Operating Systems, Computer Networks, Object-Oriented Programming, System Design, Software Testing, CLI Application Development, Workflow Automation

Tools: Neovim, LaTeX

EDUCATION

Vishwakarma University, Pune, Maharashtra

Bachelor of Technology in Computer Science (AI & ML) — Expected May 2028

EXPERIENCE

Resonic Industries — Industry Project Contributor, Scanforge Security Scanner

Pune, India | Nov 2025 – Feb 2026

- Built source-code analysis functionality for Scanforge by implementing and testing features within a student development team, delivering a working security-analysis tool reviewed by the startup sponsor.
- Coordinated feature planning and testing with the startup sponsor through regular implementation discussions, gaining experience in industry-oriented collaborative development.

PROJECTS

SOZO | Python, SQLite, CLI

- Built a local-first CLI knowledge system with SQLite-backed, event-driven architecture, enabling structured capture, organization, and searchable retrieval of activities and notes.

DaemonV | Java, Linux, CLI

- Built a zero-dependency Java daemon monitoring active windows and idle state, enabling continuous context-aware automation through lightweight command-line controls with minimal resource usage.

USBguard | Python, Linux, Firejail, ClamAV

- Built a Linux USB security utility using read-only mounting, Firejail sandboxing, and ClamAV scanning, preventing direct interaction with untrusted removable storage before inspection.

aalas-ka-hit | Python, Windows, Groq

- Built an offline-first Windows utility with adaptive task scheduling and optional Groq-based reflection, replacing streak-based productivity prompts with low-pressure, behavior-aware notifications.

Clanka | Python, Ollama, CLI

- Built a terminal-native AI assistant running local LLMs through Ollama, enabling contextual code assistance and queries for developer workflows without cloud dependency.

MediCheck | Python, LangChain, FAISS, Streamlit

- Built a RAG pipeline with FAISS-based semantic retrieval and HuggingFace models, enabling context-aware question answering from uploaded medical PDF documents.

dell-e-port | Debian Linux, Docker

- Built and maintained a self-hosted Debian server using Docker containerization and Git-based deployment workflows, enabling personal media management and infrastructure hosting.
