

Vikas Dhruw

Computer Science (AI & ML) Student | Systems Engineering | Linux | Developer Tools

Pune, Maharashtra, India | Email | GitHub

LinkedIn | Portfolio

SUMMARY

Computer Science (AI & ML) student building Linux-first developer tools, workflow automation systems, and terminal-native software. Interested in systems engineering, backend development, operating systems, and AI-powered developer tools. Focused on designing local-first software with modular architectures and practical automation.

EDUCATION

Vishwakarma University

Bachelor of Technology in Computer Science (AI & ML)

Pune, Maharashtra

Expected May 2028

EXPERIENCE

Resonic Industries

Nov 2025 – Feb 2026

Industry Project Contributor – Scanforge Security Scanner

Pune, India

- Contributed to the development of **Scanforge**, a source-code security analysis tool developed as an industry-sponsored academic project.
- Collaborated with a student development team while working with the startup sponsor on implementation, testing, feature discussions, and project planning.
- Gained experience working on collaborative software development in an industry-oriented environment.

PROJECTS

SOZO | *Python, SQLite, CLI*

GitHub

- Built a local-first CLI knowledge system for capturing, organizing, and retrieving thoughts, ideas, and daily activities as structured knowledge.
- Designed an event-driven architecture with SQLite-backed storage, markdown-based notes, searchable timelines, concept organization, and modular CLI workflows.
- Extending the platform with semantic search, knowledge graph visualization, and AI-assisted thought structuring while preserving a local-first architecture.

DaemonV | *Java, Linux, CLI*

GitHub

- Built a zero-dependency Java daemon designed to operate continuously with minimal resource usage while monitoring user activity and enabling context-aware automation.
- Implemented configurable triggers, idle detection, process monitoring, and context-aware automation through lightweight command-line controls.

USBguard | *Python, Linux, Firejail, ClamAV*

- Developed a Linux USB security utility that safely mounts and analyzes removable storage before allowing user interaction.
- Designed around least-privilege principles using read-only mounting, Firejail sandboxing, ClamAV scanning, and suspicious file analysis.
- Implemented live USB monitoring, terminal-based inspection workflows, and secure sandboxed file opening for untrusted media.

aalas-ka-hit | *Python, Windows, Groq*

GitHub

- Built an offline-first Windows utility that encourages users to begin small tasks through low-pressure context-aware notifications instead of traditional productivity systems.
- Implemented adaptive task scheduling, quiet background execution, burnout-aware behavior, and optional AI-assisted reflection using Groq.

- Designed around behavior-aware scheduling principles that prioritize consistency over streaks or productivity pressure.

Clanka | *Python, Ollama, CLI*

GitHub

- Built a terminal-native AI assistant that runs local large language models through Ollama for developer-focused workflows.
- Designed lightweight command-line interactions for contextual code assistance, quick queries, and local LLM workflows without cloud dependency.

MediCheck | *Python, LangChain, FAISS, Streamlit*

GitHub

- Developed a Retrieval-Augmented Generation (RAG) application capable of answering questions from uploaded medical PDF documents.
- Built document ingestion, embedding generation, semantic retrieval with FAISS, and context-aware response generation using HuggingFace models.

dell-e-port | *Debian Linux, Docker*

GitHub

- Designed and maintained a self-hosted Debian server for media management and personal infrastructure using Docker containers.
- Worked with Linux system administration, container deployment, Git-based workflows, and self-hosted services.

TECHNICAL SKILLS

Programming Languages: Python, Java, C, SQL, Bash

Frameworks & Libraries: FastAPI, Streamlit, LangChain, Scikit-Learn, FAISS

Databases: SQLite

Developer Tools: Git, GitHub, Docker, Neovim, LaTeX

Operating Systems: Linux (Debian), Linux System Administration

AI & LLM: Retrieval-Augmented Generation (RAG), Ollama, HuggingFace, Groq API Integration, LLM Applications

Core Concepts: Data Structures & Algorithms, Operating Systems, Computer Networks, Object-Oriented Programming, Backend Development, CLI Application Development, Workflow Automation
