EDUCATION

Vishwakarma University
B.Tech in Computer Science (AI/ML)

Pune, India
Expected 2028

EXPERIENCE

Resonic Industries
Industry Project Contributor – Scanforge: Security Code Scanner

Nov 2025 – Feb 2026
Pune, India

- Worked with a small external industry team on the Scanforge security code scanner project.
- Contributed to workflow planning, implementation discussions, and development coordination.

PROJECTS

USBguard | *Linux, Firejail, ClamAV, CLI*

- Built a Linux CLI utility that isolates and safely analyzes external USB drives using restricted mount options and sandboxed environments.
- Implemented read-only mounting, ClamAV scanning, Firejail-based media isolation, and automated cleanup workflows.

MediCheck | *Python, LangChain, FAISS, Streamlit*

- Built a Retrieval-Augmented Generation (RAG) medical assistant using FAISS vector databases and HuggingFace models.
- Implemented PDF ingestion, embedding pipelines, semantic retrieval, and structured AI-generated responses.

Sozo | *Python, CLI Automation, Workflow Systems*

- Developing a CLI productivity and workflow system for task management, repository tracking, and adaptive scheduling experiments.
- Focused on automation, lightweight workflows, and reducing manual project management overhead.

DaemonV | *Java, System Monitoring, CLI*

- Built a background Java daemon that monitors system activity and generates context-aware AI observations.
- Implemented idle detection, silent modes, behavior-based triggering, and lightweight CLI controls.

Clanka | *Python, Ollama, CLI*

- Built a terminal-native AI assistant designed for local LLM inference using Ollama.
- Implemented lightweight CLI workflows, contextual responses, and code-aware interactions.

HostelOps | *Python, Streamlit*

- Built a hostel issue-tracking platform where students can submit complaints with proof images and admins can verify resolutions.
- Implemented issue timelines, admin workflows, and structured complaint management systems.

dell-e-port | *Debian Linux, Docker, Self-Hosting*

- Self-hosted media and automation services on a Debian-based home server using Docker and Git-based deployment workflows.
- Worked with Linux system administration, container management, and lightweight deployment automation.

TECHNICAL SKILLS

Languages: Python, Java, C, SQL, Bash

Frameworks: FastAPI, Streamlit, LangChain, Scikit-Learn

Developer Tools: Git, GitHub, Docker, Linux CLI, LaTeX

Systems & Platforms: Debian Linux, i3wm, Hyprland, Self-Hosting

Core Interests: Systems Engineering, Backend Development, AI Integration, Workflow Automation
